

## Level Sensor with M12 Thread Hygienic

### Application

- Level detection of fluid and conductive media in vessels and pipes (min. conductivity 1µS/cm but depending on the transmitter)

### Application Examples

- Full- / empty detection in vessels
- Dry running protection of pumps
- Overfill protection in dosing plants

### Hygienic Design / Process Connection

- Hygienic and easy cleanable measurement point (3-A certificate, EHEDG permit)
- Elastomer free sealing system, the connection will be without gaps and crevices (see Product Info 'Processconnection')
- CIP- / SIP-cleanable up to 140°
- Food compatible materials according to FDA
- Sensor completely made of stainless steel and PEEK isolation of PFA
- Adapters available for all current process connections

### Features

- Defined position of the cable entry
- Available with or without integrated level transmitter
- Different electrical connections available
- Individual shortening and twisting of the rod is possible
- Compact housing for pipes from DN15

### Options / Accessories

- High temperature version available (with neck tube 100mm)
- Cable version (NVS-08x) available with different cable lengths

### Selection of the right sensor type

- Coating
 

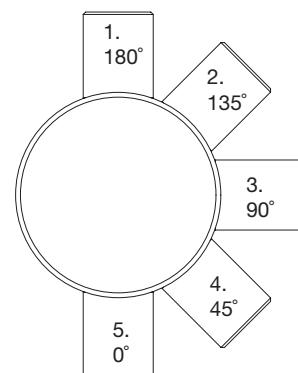

For foamy, adhesive (e.g. yoghurt) and wetting media (e.g. alkaline solutions), we suggest to use a sensor with a coated rod. Sensors with bright rod are suitable for watery, not adhesive and not wetting media.
- Temperature
 

If a sensor with integrated level transmitter **MNV** is needed, we suggest to use the high temperature versions if the medium temperature is higher than 100°C (option **H**).

**Attention:** Use only Negele weld-in systems, to ensure a safe function of the measurement point!

### Conditions for a measuring point according to 3-A-Standard 74-03:

- The sensors NVS-041A, -061A, -081A are approved according to the 3-A-Standard.
- Only with the build-in system CLEANadapt (EMZ, EMK, EHG with tube > DN25, ISO 20 und 1", Adapter AMC, AMV, AMA and AMB) allowed.
- The welding seam by using of EMZ, EMK has to correspond with 3-A-Standard 74-03, D6.1.4: "The minimum radii for fillets of welds in product contact surfaces shall be not less than 1/4 in. (6.35 mm) except that the minimum radii for such welds may be 1/8 in. (3.18 mm) when the thickness of one or both parts joined is less than 3/16 in. (4.76 mm)."
- Self draining has to be warranted by the build-in position (pos. 1, 2, or 3).
- The process connection needs a self-draining leakage hole.

## Specification Level Sensor

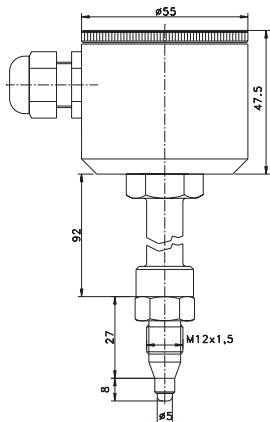

Process connection	hygienic	Weld-in fitting e.g. <b>EMk-032</b> or <b>EHG-... / M12</b>
Rod length	torque Rod length (cutable)	5...10 Nm NVS-041;061;081 NVS-043;046;063 -066;083;086
Material	Connection head Rod / Electrode Isolator Coating	303 (1.4305) 316L (1.4404) PEEK (acc. to FDA) PFA (acc. to FDA)
Pressure		max. 10 bar
Temperature range	process / cleaning* ambient*	140 °C -10...+60 °C
Electr. connection	cable entry plug-in  cable 2,5 m with level transmitter without level transmitter	M16x1,5 (PG) M12-plug 303 (1.4305) 3/4pol.  Silicone 2x0,5 mm <sup>2</sup> PVC 4x0,25 mm <sup>2</sup>
Protection class		IP69K

\* If a level transmitter is integrated, please take care about the temperature specification of the level transmitter (see below).

## Level transmitter MNV-1C; MNV-M

Temperature	operating	-10...+60 °C
	storage	-20...+60 °C
Humidity	without condensate	0...95 % r. H.
Power Supply		15...36 V DC
Electrode E1	voltage	1,5...2 V AC / 300 Hz no DC signal
Sensitivity	MNV-1C	0,1; 1; 10; 100 kOhm
selectable	MNV-M	0,2; 2; 20 kOhm
Output	short-circuit-proof	active 50 mA
Delay	fix	0,5 s
Switching logic		
min/max selectable	MNV-1C MNV-M	via jumpers polarisation of supply

Level sensor  
**NVS-041/M** with  
level transmitter  
**MNV-1C**

## Mounting Instructions

- Take attention of the maximum torque when you build in the sensor!
- To guarantee a safe function, take a look on a good electrical connection between process connection and pipe or vessel. **Do not use any kind of sealing band** like e.g. Teflon tape!
- If the stub sensor (e.g. NVS-041) is used in pipes, take care that the electrode will emerge if the pipe runs out. We propose to install the sensor in vertical pipes.
- Vessel resp. pipe wall must be of metal!
- For mounting and demounting the sensor, please use the spanner flat only! Do not use the connection head!

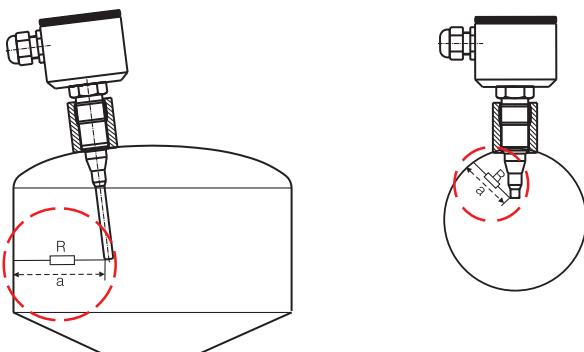

## Startup the Level Sensor

- If necessary cut the electrode to the length you need. Take care that the compound between rod and sensor is not stressed to much. Do not damage the coating of the rod on the sensor side!
- Strip the isolation of coated rods at the sensor tip. 5mm are most time enough.
- Screw the sensor into the fitting. Electrical connection according page 3. Take care of the coating when you mount the sensor!

## Startup the level transmitter MNV-1C, MNV-M

- connect the module to power supply
- setup the switching logic (description see page 3)
- select the lowest sensitivity (0,1k) (description see page 3)
- wetting the electrode with the medium with the lowest conductivity
- if the output is switching, the setup is finished
- if the output is not switching, increase the sensitivity until the output is switching. Setup is finished.

## Calculation of the minimum conductivity of the medium

a = shortest absolute length between vessel/pipe and electrode  
K = geometric factor for the distance a ( $a/\text{cm}^2$ )

R = resistance of the medium

$$R_{\text{max}}: \text{NVS-14x/M} = 100 \text{ kOhm}$$

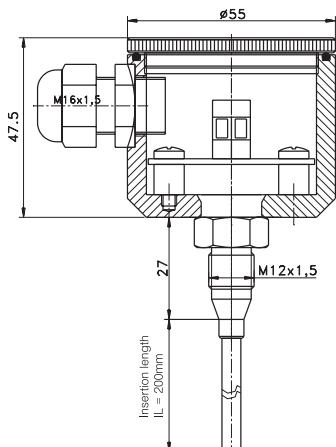

$$\text{NVS-16x/M ; NVS-18x.M} = 20 \text{ kOhm}$$

Example for the calculation of the minimum conductivity with NVS-141/M

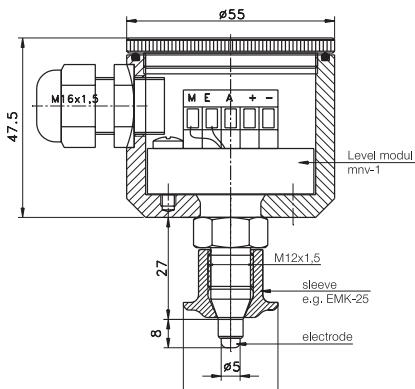

Distance a = 2,5 cm; factor K:  
maximum resistance  $R_{\text{max}}$ :  
minimum conductivity  $\text{con}_{\text{min}}$ :  
specific minimum conductivity of the medium:  
 $\text{con}_{\text{min}} (\mu\text{S}) \times K (1/\text{cm}) = 10 \mu\text{S} \times 2,5/\text{cm} = 25 \mu\text{S}/\text{cm}$

If the conductivity of your medium is lower than the calculated value the NVS-141/M can be used if the distance is reduced by another sensor position.
